EDUCATION

Embry-Riddle Aeronautical University

Bachelor of Science in Aerospace Engineering, Minor in Applied Mathematics

Daytona Beach, FL

Expected Graduation: Dec. 2027

GPA: 4.0

South Puget Sound Community College

Associate's in Arts

Olympia, WA

Sep. 2022 – Jun. 2024

GPA: 4.0

PROJECTS

Offboard Control and PX4 Integration

Aug 2025 – Apr 2026

AIRHOUND Project, Engineering Physics Propulsion Lab

- Integrated PX4 middleware and executed hardware troubleshooting to establish reliable offboard/onboard UAV flight control
- Performed hands-on testing to identify and resolve performance issues, documenting setup, data, and results in a formal technical paper

Compressible Flow Nozzle Analysis Project | MATLAB

Apr 2026

- Programmed a computational model for converging-diverging nozzles, classifying compressible flow states and mapping pressure and Mach distributions across seven regimes
- Mapped internal shock wave locations and calculated exit flow angles for over- and under-expanded nozzles, graphing results to verify theoretical flow behavior

Orbit Determination Project | MATLAB, L^AT_EX

Mar 2026 – Apr 2026

- Applied the Gauss Method in MATLAB to extract standard orbital elements from raw observational data
- Debugged and optimized iterative loops within the model to ensure calculation accuracy
- Compiled mathematical derivations, code structure, and final orbital analysis into a formal L^AT_EX report

Design, Build, Fly | AIAA Student Member

Aug 2024 – Apr 2025

- Constructed prototype aircraft components, gaining hands-on experience with composite skin application and structural wing assembly
- Inspected parts throughout the build process to verify compliance with design specifications and flight-worthiness

WORK EXPERIENCE

Meconis Italian Subs

Lacey, WA

Team Member

Nov. 2022 – Present

- Communicated clearly and professionally with customers and team members in a fast-paced, high-volume environment, ensuring accuracy and minimizing errors under time pressure
- Collaborated closely with coworkers during peak operations, coordinating tasks in real time to maintain workflow efficiency and meet demand
- Maintained a safety-conscious, organized workspace and consistently followed procedures, reflecting reliability and attention to detail

TECHNICAL SKILLS

Programming Languages: Java, Python, C/C++, MATLAB

Engineering Software: CATIA, CFD Analysis, ROS2, PX4

Tools: Git/GitHub, L^AT_EX, Microsoft Office Suite

HONORS & AWARDS

Presidential Scholarship – Fall 2024 – Present

Dean's List – Fall 2024 – Spring 2026
